PROFILE

First-Class Computer Science (Software Engineering) graduate with hands-on experience across IP networking, Windows and Linux systems, cloud infrastructure, scripting and technical support. Built and troubleshot environments involving Active Directory, DNS, LDAP, virtual machines, AWS infrastructure and client-server communication. Experienced in diagnosing connectivity, software, hardware and account issues while supporting customers in English and French. Strong interest in network engineering, technical deployments, infrastructure troubleshooting and communications technologies.

TECHNICAL CAPABILITIES

Networking: TCP/IP, IP addressing, DNS, DHCP, NAT, HTTP/HTTPS, TLS, client-server communication, connectivity troubleshooting

Systems & Infrastructure: Windows, Windows Server 2022, Linux/Ubuntu, Active Directory, VMware, virtual machines, LDAP

Programming & Scripting: Python, Java, PowerShell, Spring Boot, JavaScript, REST APIs

Technical Delivery: Troubleshooting, root-cause analysis, deployment support, technical documentation, architecture diagrams

Cloud & DevOps: AWS EC2, Elastic Beanstalk, VPC, RDS, S3, CloudFront, ALB, Auto Scaling, IAM, CloudWatch, Docker, Git/GitHub, Maven

Data: SQL, PostgreSQL, JPA/Hibernate, relational databases

Microsoft Tools: 5+ years academic/project use of Excel, PowerPoint, Word and Visio for analysis, diagrams, reports and presentations

Customer Communication: Technical support, case ownership, escalation, stakeholder communication, English and French

SELECTED TECHNICAL PROJECTS

Hospital Network & Identity Integration Project

Windows Server 2022, Active Directory, Ubuntu, LDAP, Python, PowerShell, VMware

- Built and configured a Windows Server 2022 domain environment in VMware with Active Directory Domain Services, DNS, users, security groups and role-based access.
- Configured Windows and Ubuntu virtual machines on the same network, verified IP/DNS settings, tested connectivity and validated access to shared services.
- Integrated Ubuntu and Python applications with Active Directory through LDAP, testing user searches, authentication and group-based authorisation.
- Automated provisioning and group administration with PowerShell/Python, reproduced faults involving ports, credentials and domain settings, and documented the fixes in a technical guide.

Good Mood Food - Backend & AWS Deployment

Java, Spring Boot, PostgreSQL, AWS

- Rebuilt the backend in Java and Spring Boot with PostgreSQL, separating controller, service, repository and persistence responsibilities for maintainable development.
- Implemented and tested REST endpoints to retrieve food recommendations by mood and create, update and delete food records using Spring Data JPA/Hibernate.
- Managed entities, queries and application configuration; used Postman, logs, feature branches and pull requests to test and review changes throughout development.
- Deployed the application to AWS with Elastic Beanstalk and related services, configuring application settings, database connectivity, access controls and CloudWatch monitoring.

Networking & Infrastructure Practice

TCP/IP, DNS, DHCP, NAT, ARP, Windows, Linux, AWS

- Configured and tested IP networking across Windows and Ubuntu environments; checked IP addressing, gateways and DNS settings, and used `ipconfig`, `ping` and `nslookup` to troubleshoot reachability and name resolution.
- Applied TCP/IP, DNS, DHCP, NAT, ARP and subnetting in university and independent infrastructure work, with practical exposure to AWS VPCs, subnets and security groups.

PROFESSIONAL EXPERIENCE

Customer Service Colleague

Tesco | Hull, UK | Sep 2024 to Present

- Resolve customer issues in a high-volume environment while maintaining service quality, accuracy and operational priorities.
- Gather information to understand requirements, coordinate with colleagues and manage competing activities simultaneously under pressure.
- Adapt communication to different audiences and build effective working relationships across the wider store team.

French Technical Support Specialist

Pole To Win | Glasgow, UK | Jun 2024 to Sep 2024

- Provided bilingual French and English technical support through telephone, live chat and email, handling approximately 20-40 customer cases per day.
- Gathered symptoms and environmental context before troubleshooting software, connectivity, Windows, hardware and account issues using structured diagnostic processes.
- Managed concurrent cases while prioritising troubleshooting, documentation, escalation and follow-up to maintain timely customer support.
- Collaborated with colleagues and specialist support teams to resolve technical issues, document outcomes and support repeatable troubleshooting practices.
- Escalated complex incidents with relevant evidence while retaining ownership and continuity of the customer experience.

IT Intern

Final International University | Kyrenia, North Cyprus | Jun 2022 to Nov 2022

- Supported staff and students with Windows, software, hardware and network-connectivity issues; installed and configured Windows workstations.
- Diagnosed faults across hardware, software and network layers and communicated technical findings to users with varied technical knowledge.

EDUCATION

BSc (Hons) Computer Science - Software Engineering

University of Hull | Hull, UK | First-Class Honours | 2025

Relevant study: Databases and Networks, Distributed Systems Programming, Secure Digital Infrastructure, Software Engineering Design Patterns, Safety-Critical Systems, Digital Disruption and Innovation.

Business Management - Management Information Systems

Final International University | North Cyprus | 2021 to 2023

Studied information systems, business processes and technology-supported organisational decision-making before transferring to Computer Science.

CERTIFICATION & DEVELOPMENT

AWS Certified Solutions Architect - Associate | In Progress

Practical development in cloud architecture, networking, availability, security, IAM, monitoring and resilient infrastructure.

ADDITIONAL INFORMATION

Travel availability	Available to travel approximately 25% as required.
Maintenance windows	Available to support scheduled night maintenance windows as required.
Career focus	Network engineering, communications technology, cloud infrastructure and technical delivery.

LANGUAGES

English Fluent | French Fluent | Mandarin Chinese Conversational
